Why CryptoHeart?

Spurred on by the incredible growth of bitcoin and ether, the field of crypto has only continued to expand and increase in value. Our vision with CryptoHearts is to take this momentum from the Ethereum network and expand into the more mature and efficient PulseChain network. We want to contribute to this evolving technology by giving CryptoHearts to the PulseChain community, free of charge.

CryptoHeart will be at the bleeding edge of blockchain technology, and we are excited to give it out completely free and with sufficient liquidity, all through a fair launch and claim phase. Only requirement is that your address used to claim has a sacrifice transaction to the PulseChain. All the unclaimed CryptoHeart will be burned at the end of this phase, leaving only a small amount out in the market.

So why PulseChain?

Compared to other layer 1 networks like Ethereum and BNB, Pulsechain tries to solve known issues by:

- Bringing Ethereum system state to a cheaper network
- Environment friendly, by removing miners
- Increased throughput, with 3 second blocks
- 0% inflation with fee burning.

Therefor the choice was obvious. CryptoHearts will be deployed as an erc20 contract on the PulseChain network. Inside the contract are addresses associated with the PulseChain sacrifice who is the only ones alliable to claim it.

Token Distribution

500 000 000 tokens will be able to claim for PulseChain sacrifice addresses specified in the smart contract

- There will be no pre-sale
- No sacrifice phases
- No private or external funding received
- No admin keys
- 1% of the total claim amount will be sent to a known address and the holder of the private key decides what to do with them
- 300 000 tokens will be sent to a known address for liquidity purposes with full transparency
- No minting or inflation outside of launch phase
- No purchase or exit taxes
- No reflection fees
- No forced staking mechanism
- No referral programs
- Sufficient uniswap liquidity for trading at launch
- No rug pulls or shenanigans policy
