Why CryptoHeart?

There's little doubt that digital currencies have seen remarkable growth. Spurred on by the incredible growth of bitcoin and ether, the field of crypto has only continued to expand and increase in value. Our vision with CryptoHearts is to take this momentum from the Ethereum network and expand into the more mature and efficient PulseChain network. We want to contribute to this evolving technology by giving CryptoHearts to the PulseChain community for free of charge.

CryptoHeart will be at the bleeding edge of blockchain technology, and we are excited to give it out completely free and with sufficient liquidity, all through a fair launch and airdrop. Only requirement is that your MetaMask wallet is connected to the PulseChain network. All the unclaimed CryptoHeart will be burned at the end of this phase, leaving only a small amount out in the market.

So why PulseChain?

Compared to other layer 1 networks like Ethereum and BNB, Pulsechain tries to solve known issues by:

- Bringing Ethereum system state to a cheaper network.
- Environment friendly, by removing miners
- Increased throughput, with 3 second blocks
- 0% inflation with fee burning.

CryptoHeart will airdrop a token on PulseChain that is more environment friendly, has lower gas fees and much higher throughput than currencies on the Ethereum network.

Token distribution

- 10 000 000 000 tokens will be minted
- There will be no pre-sale.
- No sacrifice phases
- No private or external funding received
- No admin keys
- No minting or inflation outside of launch phase
- No purchase taxes
- No exit taxes
- No reflection fees
- No forced staking mechanism
- No referral programs
- Sufficient uniswap liquidity for trading at launch
- No rug pulls or shenanigans policy

Conclusion

This coin will be lit
